

AMENDMENTS TO THE CLAIMS

1. – 6 (Cancelled)

7. (Currently amended) A mobile device, comprising:

an interface;

a display coupled to the interface;

a processing unit coupled to the interface; and

an image input unit coupled to the processing unit, said image input unit providing image or video in a first format for viewing on said display,

wherein image signals generated by the image input unit are processed by the processing unit and outputted by the interface to a video format compatible device for display or storage, said processing unit operative to convert from said first format to a second format, said video format compatible device being a display device not capable of cellular communications.

8. (Original) The mobile device of claim 7, wherein the display is configured to simultaneously present the image signals with the video format compatible device.

9. (Original) The mobile device of claim 7, further comprising a memory coupled to the processing unit, the memory configured to simultaneously store the image signals with the video format compatible device.

10. (Original) The mobile device of claim 7, wherein the video format compatible device is selected from a group including a television, a monitor, a video cassette recorder (VCR), a video tape recorder (VTR), and a recordable DVD device.
